

Institute of Clinical & Translational Sciences - Clinical & Translational Research Unit Charge-Backs *Effective March 1, 2020*

The Institute of Clinical and Translational Sciences (ICTS) adult Clinical and Translational Research Unit (CTRU) continues to experience budgetary reductions under the current funding environment. Accordingly, we will need to increase charges for services to recover a greater percentage of expenses.

The following charges will be implemented effective **March 1, 2020**, for all new research protocols. Existing protocols will be “grandfathered” at current pricing through **December 31, 2020**. It is important to include these charges in all new grant applications and study budgets. The CTRU charge-back fees will increase ~3% annually. We encourage you to budget for the anticipated potential future increases in multi-year grant proposals.

Follow this link to see a detailed list of [CTRU services and fees](#).

Please consider taking advantage of the ICTS Just-in-Time Core Usage Funding Program, which provides up to \$5,000 per year to help cover the costs of a research study. More information on the Just-in-Time program can be obtained at the ICTS website under “[Funding Opportunities](#)”.

Although it is necessary to increase some cost recovery for services, please know that these charges are much less than actual costs, because of the support from the NIH CTSA grant and support from several departments and the medical school.
